			ART UNIT 2616	PAPER NUMBER
			MAIL DATE 02/11/2008	DELIVERY MODE PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

## Office Action Summary

Application No.

10/645,422

Applicant(s)

YAMAGUCHI ET AL.

Examiner

Chandahas Patel

Art Unit

2616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 29 November 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-42 is/are pending in the application.
- 4a) Of the above claim(s) 3-40 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1, 2, 41, 42 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- ☐ Notice of Informal Patent Application
- ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Response to Amendment*

1. Applicant's arguments, see Pages 4 and 5, filed 11/29/2007, with respect to the rejection(s) of claim(s) 1 under 35 U.S.C. 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Peyrovian et al. (USPN 6,707,800).

Regarding claim 1, applicant states that Sawyer does not teach partially exchanging the bandwidth. Examiner agrees with this. However, upon further consideration following rejection is formed based on submitted amendments.

### *Claim Rejections - 35 USC § 103*

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sawyer (USPN 5,282,737) in view of Peyrovian et al. (USPN 6,707,800).

**Regarding claim 1**, Sawyer teaches a data relay processing method [**Abstract**] comprising the steps of, sending pieces of information from a plurality of respective terminals [**Fig. 1, 16**], including a piece of information on a schedule of usage of a transmission band [**Col. 3, lines 63-67 – Col. 4, lines, 1-2**], another piece of information of a schedule of the transmission band which is available to be assigned [**Col. 3, lines 37-41**], another piece of information on a schedule of a term where the transmission band is available to be partially assigned [**Col. 3, lines 56-61**], and holding each respective schedule of each respective terminal; based on the schedule of usage, the schedule of transmission band, the schedule of term, and the necessary

communication price partially reserving or partially assigning the transmission band between the respective terminals [Fig. 1, 40, 42, 46, 44 hold information for each terminal as described in Col. 5, lines 6-28].

However, Sawyer does not teach partially assigning and partially exchanging the transmission band between the pluralities of respective terminals for maximizing the usage efficiency of the entire available transmission band based on the schedule of usage of the transmission band and the schedule of the transmission band which is available to be assigned as defined as a band reservation rule.

Peyrovian teaches teach partially assigning and partially exchanging the transmission band between the pluralities of respective terminals for maximizing the usage efficiency of the entire available transmission band based on the schedule of usage of the transmission band and the schedule of the transmission band which is available to be assigned as defined as a band reservation rule [Col. 7, lines 16-25].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to partially assign and exchange the transmission band between pluralities of terminals so that bandwidth capacity can be utilized efficiently [Col. 7, lines 16-25].

4. Claims 2, 41, 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sawyer (USPN 5,282,737) in view of Peyrovian et al. (USPN 6,707,800) as applied to claim 1 above, and further in view of Iwata (USPN 5,933,425).

**Regarding claim 2,** the references teach a method as discussed in rejection of claim 1.

However, the references do not teach based on history information of the past processing record with respect to processes of partially assigning or partially exchanging of the transmission band between respective terminals and based on information with respect to transmission band, the transmission band is partially assigned or partially exchanged.

Iwata teaches based on history information of the past processing record with respect to processes of partially assigning or partially exchanging of the transmission band between respective terminals and based on information with respect to transmission band, the transmission band is partially assigned or partially exchanged [**Col. 5, lines 38-59, Path A-C-D-E is selected where needed transmission band is only 20 Mbps and A-C is at 50 Mbps, D-E and C-D are at 25 Mbps therefore using only 20 Mbps will partially use the bandwidth of links A-C, C-D and D-E**].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to assign transmission band based on history information so that specified QOS parameter can be satisfied [**Col. 5, lines 23-29**].

**Regarding claim 41**, the references teach a method as discussed in rejection of claim 1.

However, the references do not teach the information sent from each terminal is stored in respective terminals; and the transmission band available to be assigned, defined by the piece of information from one terminal on a schedule of the transmission band which is available to be assigned, is assigned to or exchanged with an other terminal based on the information stored in respective terminals, thereby connecting the one terminal and the other terminal to a server.

Iwata teaches the information sent from each terminal is stored in respective terminals; and the transmission band available to be assigned, defined by the piece of information from one

terminal on a schedule of the transmission band which is available to be assigned, is assigned to or exchanged with an other terminal based on the information stored in respective terminals, thereby connecting the one terminal and the other terminal to a server **[Col. 1, lines 50-65]**.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to store information in each terminal and assign transmission band based on information stored in the terminal so that user-specified QOS can be met with short connections establishment delay **[Col. 1, lines 43-46]**.

**Regarding claim 42**, the references teach a method as discussed in rejection of claim 1.

However, the references do not teach the information sent from each terminal is stored in respective terminals; during the term defined by the piece of information from one terminal on a schedule of a term where a transmission band is available to be assigned or exchanged, the transmission band available to be assigned, defined by the piece of information from the one terminal on a schedule of the transmission band which is available to be assigned, is assigned to or exchanged with an other terminal based on the information stored in respective terminals, thereby connecting the one terminal and the other terminal to a server during the term defined by the piece of information of the one terminal on the schedule of the term where the transmission band is available to be assigned or exchanged.

Iwata teaches the information sent from each terminal is stored in respective terminals; during the term defined by the piece of information from one terminal on a schedule of a term where a transmission band is available to be assigned or exchanged, the transmission band available to be assigned, defined by the piece of information from the one terminal on a schedule of the transmission band which is available to be assigned, is assigned to or exchanged with an

other terminal based on the information stored in respective terminals, thereby connecting the one terminal and the other terminal to a server during the term defined by the piece of information of the one terminal on the schedule of the term where the transmission band is available to be assigned or exchanged [Col. 1, lines 50-65].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to store information in each terminal and assign transmission band based on information stored in the terminal so that user-specified QOS can be met with short connections establishment delay [Col. 1, lines 43-46].

#### *Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chandrahas Patel whose telephone number is 571-270-1211. The examiner can normally be reached on Monday through Thursday 7:30 to 17:00 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ricky Ngo can be reached on 571-272-3139. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
